

Infant and Child Scientists Needed!

TCNJ Cognitive
Development Lab

What do
babies
think?

At the TCNJ
Cognitive Development Lab,
we research how infants and children
perceive and reason about the world around
them. Our studies are designed to be fun
puppet shows and games for infants and
children between 0 and 6 years old. We
study topics such as learning, language,
and memory, while children have fun!

We would love for you and your child to
participate in our research!

Our work has been featured on
NPR, CNN, PBS

Good Morning America,
Time, Scientific American,
and more!

Interested?

We are looking for infants and children from 0-6 years of age to participate!
Children find our studies fun and interesting, and so do their parents.
As a thank-you, we give your child a small gift.
If you would like to participate or learn more, please contact us any time!
